## Down

- 2. The zone immediately below the land surface where pores contain both water and air
- 4. The area of land that drains water to a particular stream, river or lake
- 7. A narrow hole made in the ground, generally drilled to locate water or oil.
- 8. The flow in a stream during dry periods
- 11. Water found beneath the grounds' surface in the pores of soils and rocks
- 12. Water that is found on the Earth s surface, for example streams, rivers and lakes (2 words)
- 13. A geological formation that is water bearing
- 14. The lowering of the water level in an aquifer dur to the pumping of groundwater
- 16. The type of aquifer overlain by a confining layer

## Across

- Applying a force to extract water from a well
- 3. The type of ecosystem closely associated with a body of water
- 5. Addition of water to the water table as a result of infiltration
- 6. The ability of a material to allow the passage of liquid through it.
- 9. The top of the water surface in the saturated part of an unconfined aquifer (2 words)
- 10. The empty spaces found between sediment grains.
- 12. The zone where all pore space (voids) are filled with water.
- 15. The movement of groundwater form the subsurface to the surface
- 17. One of the most important aquifers in Alberta found along the Edmonton-Calgary coordidor is the (BLANK) formation
- 18. Snow and rain are examples of this
- 19. The type of aquifer that has no conifing layer between the zone of saturation and the surface.
